ABSTRACT OF THE DISCLOSURE

METHOD AND APPARATUS FOR PRESENTING CALLER IDENTIFICATION INFORMATION WITH GEOGRAPHICAL AND/OR SOURCE LANGUAGE INFORMATION

A method, apparatus, and computer instructions for processing calls. Initiation of a call by a user is detected in the communications device. In response to detecting the call, a geographic identification based on a number assigned to the communications device and/or a language identification based on a user of the communications device is identified. The geographic identification and the language identification are transmitted with caller identification information for use by a called party.
